The joint Commission met at the office of the Mexican Commissioner in Juárez, Chihuahua, Mexico, at eleven A.M. The Commissioner of the United States presented a communication from Mr. R. Costerven, an attorney at law, of Río Grande City, Texas, which communication concerns the controversy between his client, Rafael Valadez, and others, over lands alleged to be accretions to La Puerta Bank No. 59, which was eliminated in 1910 by the Boundary Commission. Some discussion was held, of the established precedents in the matter of the jurisdiction of the International Boundary Commission in such cases and reference was made to the action of the Commission's decision on a Colorado River case involving the designation of certain accretion lands. The Commissioner of Mexico suggested, and it was agreed to by the Commissioner of the United States, that the consulting engineers investigate the records and make a report on the past history of the case and include in recommendations, information as to the character of the river change which occurred to affect the land area involved, as well as an outline of the field engineering procedure which may be taken, if approved by the Commission, to properly designate the area or areas under attention.
